

Why Achieve ISO 14001 Certification?

Every company affects the environment, from the energy, water and raw materials used to the waste produced. When your company achieves ISO 14001 certification – a globally recognized standard – you minimize and continually improve your impact on the environment from your company's operations, products and services.

Power Your Business Forward.

SurePath from Management Systems International (MSI) ensures successful certification.

ISO 14001- The Green Standard

ISO 14001 specifies requirements for systematically managing environmental performance to proactively improve impact by:

- » Identifying and addressing environmental footprint and pollution prevention programs
- » Enabling environmental policy and objective development considering customer, legal and other requirements
- » Ensuring you achieve environmental policies and objectives
- » Complementing a quality management system (QMS) meeting ISO 9001 requirements

Learn more about MSI's QMS implementation in our ISO 9001 & AS 9100 data sheet

MSI - Your Superior Source for a Sustainable Solution

POWER YOUR BUSINESS FORWARD

Management Systems International (MSI) expertly implements environmental management systems (EMS) to power your business forward by achieving ISO 14001 certification. Although the ISO 14001 standard provides requirements for an environmental management system, you need an experienced consulting firm to adapt these requirements to your unique business – without disrupting day-to-day operations.

As part of our full suite of turnkey and customized solutions, we offer you the SurePath® turnkey solution. SurePath methodology and procedures allow us to reliably:

- » Identify environmental aspects as well as any applicable legal and regulatory concerns
- » Develop an implementation plan with detailed tasks and an achievable timeline to be presented to your management team for approval
- » Define and document your business procedures pertinent to the ISO 14001 standard and your operations
- » Train on ISO 14001, offering a wide range of courses
- » Manage the implementation of operational and environmental procedures
- » Train and guide on internal audits
- » Coordinate audits with the registrar to ensure ISO 14001 certification

How long does implementation take? We typically complete it in six months – sometimes eight, depending on your company's size, complexity, products and services.

As a result, you valuably:

- » Demonstrate concern for the environment on an international scale while integrating existing business practices – setting the stage for continually improving environmental performance
- » Access green marketing tools to further your competitive edge and potentially increase market share
- » Increase customer confidence in your environmentally conscious practices, products and services and contribute to the global effort of sustainable development
- » Meet and integrate corporate and environmental policies and objectives, eliminating costly legal and cleanup fines due to noncompliance
- » Greatly enhance employee and customer satisfaction and successfully address any other interested parties' concerns
- » Boost profitability by reducing the use of raw materials and energy, improving recycling efforts and minimizing negative environmental emission – greatly enhancing company image
